GT MAX

ADJUSTABLE PERFORMANCE

FEATURE	BENEFIT
EXPANDING THE MODERN SHAPE OF STABILITY	Spider GT MAX brings a new element of adjustability, performance, and movable weight to the putter category. The reconstructed shape maintains features of the iconic Spider design with True Path™, while the new sliding weight track helps optimize performance.
LIGHTWEIGHT ALUMINUM CAP	Made from lightweight 6061 Aluminum, the 146g top allows more weight to transfer to the outside of the frame.
SLIDING WEIGHT TRACK	The 98g weight track on the sole is manufactured from stainless steel that allows the heavy tungsten weights to slide independently along the track to create different performance settings. Position 1 creates the deepest CG and high stability with less face rotation. Position 2 features minimal face rotation and increased toe hang. Position 3 has the most face rotation and increased toe hang.
TUNGSTEN WEIGHTS	Two heavy 40g tungsten weights are positioned on the heel and toe side of the sole and slide independently for optimal performance settings.
PURE ROLL² INSERT	The firmer co-molded insert, manufactured of black TPU urethane with silver aluminum beams at a 45° angle designed to improve topspin across the face.
TRUE PATH ALIGNMENT	The white space in the center of the putter helps frame the ball and creates a path to the hole.

SHAFT	GRIP
 KBS 120 Black Stepped Shaft	 SuperStroke GT 1.0 (Gray/Black/White)

HOSEL	FINISH	HAND	TOE HANG	LENGTH	LOFT	LIE
SINGLE BEND	Silver	RH/LH	Face-Balanced	34", 35"	2.5°	70°
SMALL SLANT	Silver	RH/LH	Adjustable / 9 options	34", 35"	2.5°	70°
