

Revolution EXT / EXT Distance / Tour

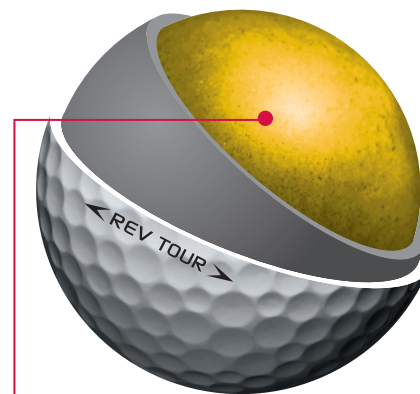

A urethane covered tour ball such as the Revolution Tour is designed for the higher swing speed players, since the velocity comes from the inside mantle layer, and high velocity cores. The Revolution EXT and EXT Distance balls have the velocity built in the outer two cover layers, to maximize the ball velocity for players who are not able to generate enough power or speed.

Revolution Swing Speed Chart

SPEEDMANTLE

Speed from the outside for slower swing speeds

SPEEDCORE

Speed from the inside for faster swing speeds
